autobrr

For information regarding autobrr, visit the [autobrr website](#).

Connection Details

The connection details for each client in `Settings -> Clients` is given below.

> Make sure to replace `{username}` , `{servername}` , etc. with your specific details.

qBittorrent

```
Host: https://{username}.{servername}.usbx.me/qbittorrent

TLS: Enabled

Username: {username}

Password: qBittorrent's Password as given in your Control Panel

Basic auth: Disabled
```

Deluge v1

```
Host: {servername}.usbx.me

Port: Deluge's Daemon Port as given in your Control Panel

TLS: Disabled

Username: {username}

Password: Deluge's Password as given in your Control Panel
```

Deluge v2

```
Host: {servername}.usbx.me

Port: Deluge's Daemon Port as given in your Control Panel

TLS: Disabled

Username: {username}

Password: Deluge's Password as given in your Control Panel
```

rTorrent

```
Host: https://{username}:{ruTorrent Password}@{username}.{servername}.usbx.me/RPC2

* The ruTorrent password can be found in your Control Panel
```

Transmission

```
Host: {servername}.usbx.me
Port: Transmissions' RPC Port as given in your Control Panel
TLS: Disabled
Username: {username}
Password: Transmission's Password as given in your Control Panel
```

Radarr

```
Host: https://{username}.{servername}.usbx.me/radarr
API Key: Radarr's API Key found in Settings -> General -> Security
Basic Auth: Disabled
```

Sonarr

```
Host: https://{username}.{servername}.usbx.me/sonarr
API Key: Sonarr's API Key found in Settings -> General -> Security
Basic Auth: Disabled
```

Lidarr

```
Host: https://{username}.{servername}.usbx.me/lidarr
API Key: Lidarr's API Key found in Settings -> General -> Security
Basic Auth: Disabled
```

Readarr

```
Host: https://{username}.{servername}.usbx.me/readarr
API Key: Readarr's API Key found in Settings -> General -> Security
Basic Auth: Disabled
```

SABnzbd

```
Host: https://{username}.{servername}.usbx.me/sabnzbd
TLS: Enabled
API Key: SABnzbd's API Key found in Settings -> General -> Security
Basic Auth: Disabled
```

Add Prowlarr Indexer Feed

- Begin by navigating to your Prowlarr webUI.
- In your Indexer list, right-click the Feed icon and copy the URL to your clipboard. As shown in the below image.
 - The URL will look like this:
    `https://username.hostname.usbx.me/prowlarr/1/api?apikey=839dktue43424ac8b9301313d23e0d9d&extended=1&t=search`
  - The following section is your **Feed URL**:
    `https://username.hostname.usbx.me/prowlarr/1/api`
  - The section between `apikey=` and `&` is your **API Key**, which in this example would be:
    `839dktue43424ac8b9301313d23e0d9d`

- Next, navigate to the autobrr webUI, go to **Settings** > **Indexers** and click the `+ Add New Indexer` button.
- In the Indexer dropdown list, choose **Generic Torznab**.
- Next, type into the following text fields:
  - **Name:** Set a name of your choice
  - **Torznab URL:** Paste the Prowlarr Feed URL that you previously copied, make sure to only paste the Feed URL section, as mentioned previously.
  - **API Key:** Paste the API Key from the previous Feed URL.
  - **Download type:** Choose Torrent
- Lastly, click the **Save** button in the bottom right corner.
- Done!

View Logs

- The autobrr logs are located in the directory `/home/{username}/.apps/autobrr/log`.
- The latest log entries can be viewed using the following command via SSH:

```
tail -f ~/.apps/autobrr/log/autobrr.log
```
