

Recommended FTP Clients

Here are some FTP clients we recommend you use to manage your Ultra.cc service files.

FileZilla

Filezilla is a free FTP application that is available on most platforms. It supports Explicit FTPS and SFTP protocols in addition to the following features:

- Supports resume of files
- Parallel downloading of files (up to 10 simultaneous transfers)
- Tabbed User Interface
- Configurable Speed limits

Installation

Go [here](#) and download the latest version for your PC. Execute the downloaded file and follow the installation instructions.

Setting Up FileZilla

- When launching for the first time, you will be greeted by the main GUI of FileZilla.
- In the top menu bar, click the **Site Manager**

- A new window appears. Click the **New Site** button and name it.

- Then, you can input the following information from either of the following configurations:

FTPS

Protocol: FTP - File Transfer Protocol
Host: servername.usbx.me
Port: 21
Encryption: Require explicit FTP over TLS

Logon type: Normal
Username: <your-ultra-username>
Password: <your-ssh/ftp-password>

SFTP (Normal Logon)

Protocol: SFTP - SSH File Transfer Protocol
Host: servername.usbx.me
Port: 22

Logon type: Normal
Username: <your-ultra-username>
Password: <your-ssh/ftp-password>

SFTP (Keyfile Logon)

For more information on this, you can refer to this guide: [Public Key Authentication](#)

Protocol: SFTP - SSH File Transfer Protocol

Host: servername.usbx.me

Port: 22

Encryption: Require explicit FTP over TLS

Logon type: Key file

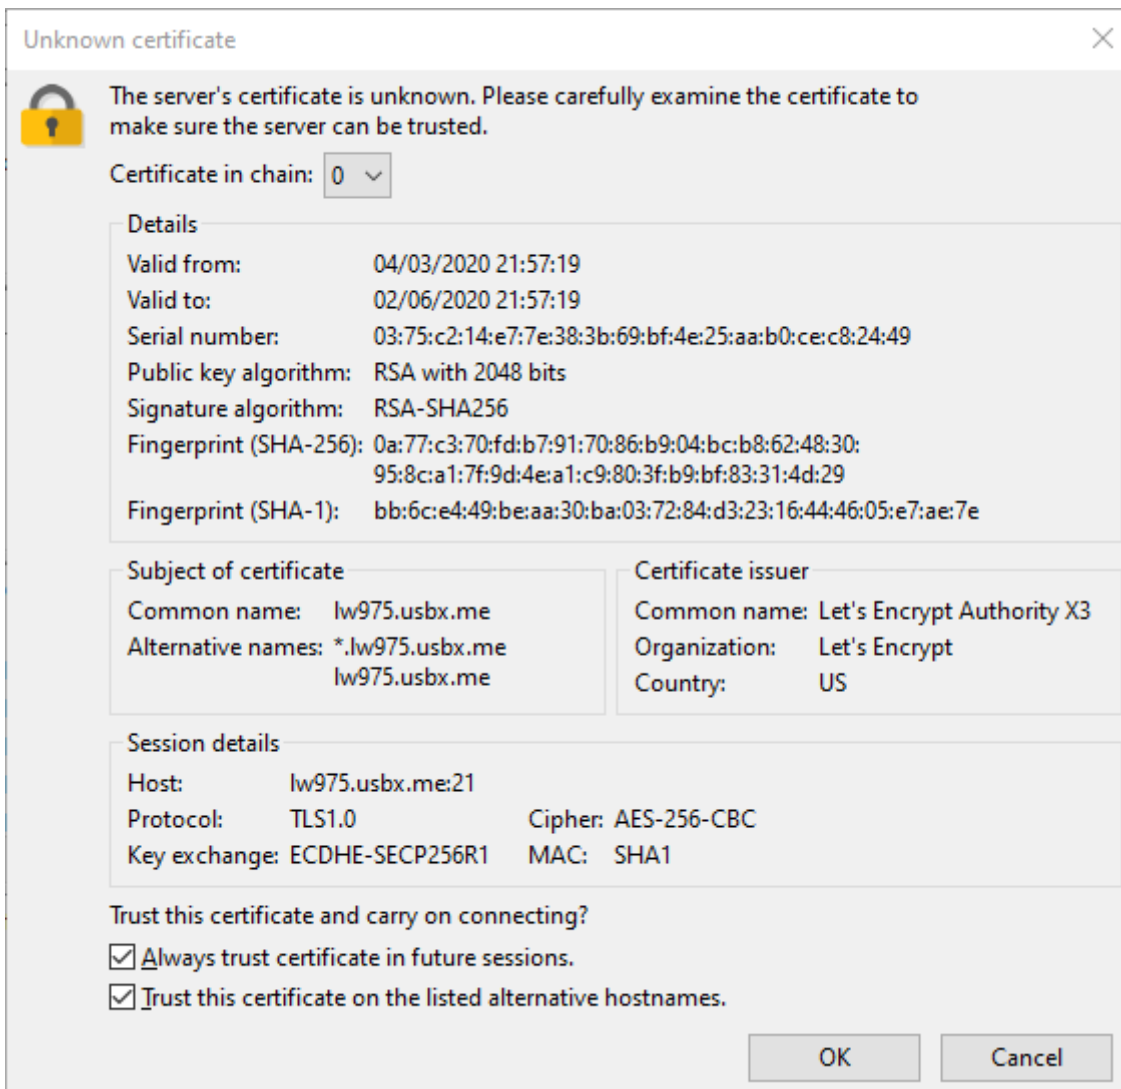

Username: <your-ultra-username>

Key file: <your-ultra-public-key>

- Once that's done, press **OK**.
- Another window appears, asking if you want to save your password. We recommend selecting "Save passwords protected by a master password". Add your master password and click **OK**.
 - Make sure to choose a strong password, see [this guide](#).
- Click the arrow icon to the right of the Site Manager icon, and select the site you previously created.

- When prompted, enter your master password.

- If logging in the first time, you will see a message as shown in the above image. Click **OK**.
- Once logged in, you will see the files and folders of your Ultra.cc service on the right side of the GUI.

WinSCP

WinSCP (Windows Secure Copy) is a free and open-source SFTP, FTP, WebDAV, Amazon S3, and SCP client for Windows. It offers basic file manager and file synchronization functionality. For secure transfers, it uses Secure Shell (SSH) and supports the SCP protocol in addition to SFTP. In addition to this, WinSCP also offers the following features:

- Batch file scripting, command-line interface, and .NET wrapper
- Directory synchronization
- Integrated text editor
- Integration with [PuTTY](#)

Installation

To download and install WinSCP, go [here](#) and download the latest version.

Setting Up WinSCP

- When launching for the first time, the login dialog will show up first.
- Here, you can add the settings you wish

FTPS

```
File Protocol:  FTP
Encryption:  TLS/SSL Explicit Encryption
Host:  servername.usbx.me
Port:  21

Username:  <your-ultra-username>
Password:  <your-ssh/ftp-password>
```

SFTP (Normal Logon)

```
File Protocol:  SFTP
Host:  servername.usbx.me
Port:  22

Username:  <your-ultra-username>
Password:  <your-ssh/ftp-password>
```

SFTP (Keyfile Logon)

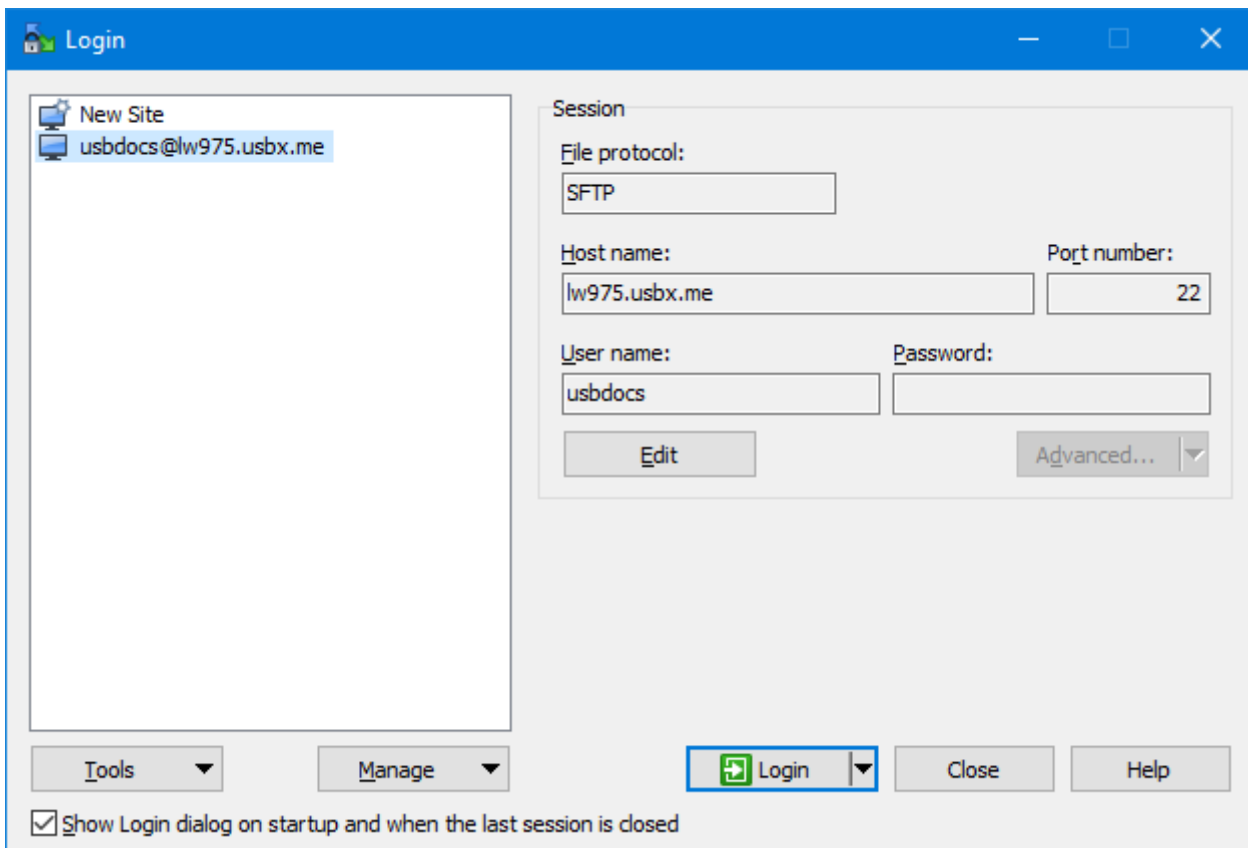

For more information on this, you can refer to this guide: [Public Key Authentication](#)

```
File Protocol:  SFTP
Host:  servername.usbx.me
Port:  22

Username:  <your-ultra-username>
Password:  <blank>
```

To add keyfile, go to Advanced -> SSH -> Authentication -> Private key file

- Once it's added, click **Save** and add a name.
 - You can check *Save Password* if you prefer. This is if you're using your own device.
- In this example, SFTP is used.

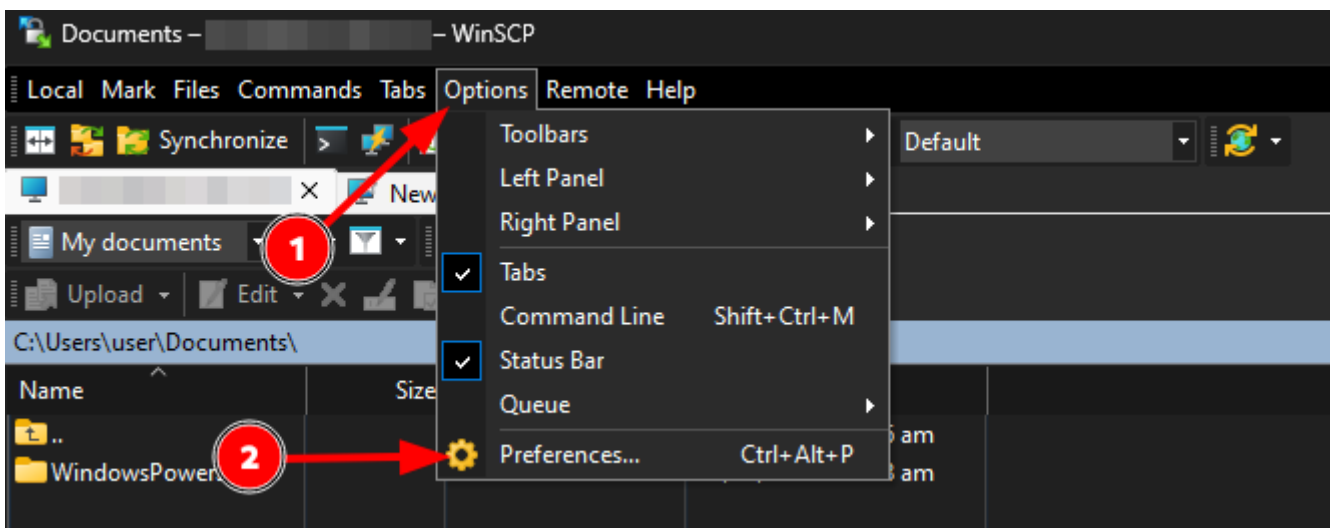

- After it has been added, double-click your newly created site to log in.

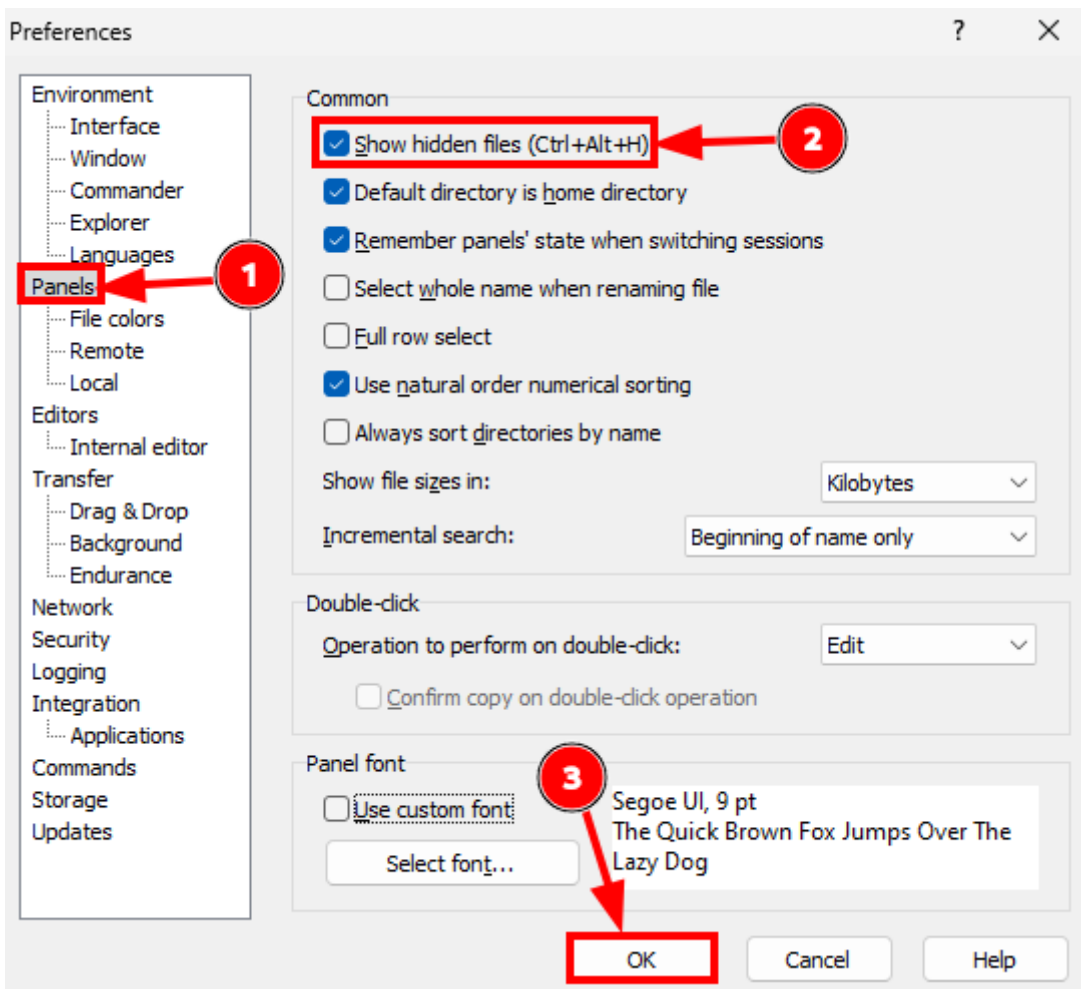

- If it is your first time logging in, a window as shown in the above image might appear. Just click **Yes** to continue.
- After a few moments, you will be logged in to your Ultra.cc service and can manage your files and folders.

Show Hidden Directories

- By default, files and folders that begin with a `.` will be hidden. However, to allow these files and folders to be seen, you can press `CTRL+ALT+H` or by enabling **Show hidden files** in **Preferences**.

- To open **Preferences**, in the top menu bar, click on  **Options** and then click  **Preferences**, as shown in the above image.

- Once the **Preferences** window appears, go to the **Panels** tab.
- Then, enable **Show hidden files**.
- Lastly, click the **OK** button.
