For more information about this app, follow [this link](#).

FlareSolvrr is a proxy server to bypass Cloudflare protection. In this guide, we will show you how to install and configure FlareSolvrr. For the sake of this guide, we will assume you already have [Prowlarr](#) or [Jackett](#) installed on your Ultra.cc service.

Initial Setup

- Install FlareSolvrr from the [UCP](#), you can find install instructions [here](#).

Add FlareSolvrr to Prowlarr

- In Prowlarr, go to `Settings > Indexers` as shown in the below image.

Enable Show Advanced to enable the maxTimeout Request Parameter ready for the next step

- Add a new indexer proxy by clicking the `+` sign as shown in the below image.

- Click the `FlareSolvrr` button as shown in the below image.

- Fill the fields with the following information:

1. Name
2. Tags
3. Host: `http: //172. 17. 0. 1: xxxxx` (replace `xxxxx` with FlareSolvrr's port that can be found under the **Apps** tab on the [UCP](#))
