

Install Rust

This is an unofficial script that is provided for your convenience. The script is provided as-is and may not be updated or maintained by Ultra.cc. Clients are welcome to use and customize unofficial scripts for their unique needs and requirements. Unofficial support may be offered via [Discord](#) only and at the sole discretion of Ultra.cc staff.
Use at your own risk.

This script will install Rust on your Ultra.cc slot. Rust is a multi-paradigm and general-purpose programming language. It was designed with an emphasis on performance, type safety and concurrency.

Installation

- Connect to your Ultra.cc service via SSH, see guide [here](#).
- Once connected, execute the following command:

```
bash <(wget -qO- https://scripts.ultra.cc/util-v2/LanguageInstaller/Rust-Installer/main.sh)
```

- Type `1` and press `ENTER` to install.
- Wait for installer to finish. This may take a while.
- Once the installation has finished, execute the following command:

```
source ~/.bashrc
```

- To check if the installation was successful, execute `rustc --version` and you should see the below output in your terminal.

```
ultradocs@spica: ~$ rustc --version  
rustc 1.75.0 (82e1608df 2023-12-21)
```

- Done!

Uninstallation

- Execute the following command:

```
bash <(wget -qO- https://scripts.ultra.cc/util-v2/LanguageInstaller/Rust-Installer/main.sh)
```

- Type `2` and press `ENTER` to proceed with uninstallation.
 - Done!
-
