

Traffic Monitor

This script will monitor your traffic usage and notify via Discord or log file at a set threshold you've set.

This is an unofficial script that is provided for your convenience. The script is provided as-is and may not be updated or maintained by Ultra.cc. Customers are welcome to use and customize unofficial scripts for their unique needs and requirements. Unofficial support may be offered via [Discord](#) only and at the sole discretion of Ultra.cc staff. Use at your own risk.

Prerequisites

- Command execution via SSH.
- [How to connect to your Ultra.cc slot via SSH?](#)

How It Works

- The script uses the `Traffic Available` value returned by the command `app-traffic info` to calculate traffic usage.
- First, you will be asked to choose the interval at which the script will check your traffic usage.
- Then, you will choose between getting notified via Discord and storing the warnings on a file.
- After that, you will get to set the threshold value at which you should get the warning. This is based on the percentage of available traffic.
- Optionally, the script can also stop all installed torrent clients on your service once the set threshold value is reached.

The script is experimental. Please do not rely on it to manage your upload traffic usage.

Installation

- Execute the following command via SSH:

```
bash <(wget -qO- https://scripts.usbx.me/main/Utility%20Scripts/traffic-monitor-install.sh)
```

Warning file Location

- Only applicable to you if you choose to store the warnings to a file instead of Discord notifications during installation
- It will be stored at the following location: `~/scripts/traffic_monitor/warning.txt`

Uninstallation

- Execute the following command via SSH:

```
bash <(wget -qO- https://scripts.usbx.me/main/Utility%20Scripts/traffic-monitor-install.sh)
```
